Ensuring Clean Water:
THM & HAA Testing at Accurate Labs

Clean and safe drinking water is a fundamental necessity, and **Accurate Labs** plays a crucial role in ensuring the quality of this essential resource. This **state-of-the-art laboratory** specializes in the analysis of disinfection byproducts (DBPs), specifically trihalomethanes (THMs) and haloacetic acids (HAAs), which can pose health risks when found in drinking water.

DBPs result from the reaction of chlorine or other disinfectants with naturally occurring organic matter in water sources. Long-term exposure to elevated levels of these compounds may lead to health issues, such as cancer and reproductive problems.

Accurate Labs employs **cutting-edge testing methods and equipment** to monitor and analyze water samples for THMs and HAAs. Their team of highly **skilled scientists** and technicians follows **stringent quality control** procedures to ensure accurate results. These tests are essential for water treatment facilities, regulatory agencies, and municipalities to maintain water quality within the safe limits mandated by regulatory bodies like the Oklahoma Dept. of Environmental Quality (ODEQ) and the Environmental Protection Agency (EPA).

Accurate Labs' commitment to public health is unwavering. By providing fast and reliable DBP testing services, they assist water treatment facilities in optimizing their disinfection processes and safeguarding the health of the communities they serve. Their work not only ensures that drinking water is free from harmful contaminants but also contributes to environmental protection by helping utilities manage disinfection byproducts effectively.

In an era where clean water is paramount, **Accurate Labs** remains dedicated to its mission of delivering **trustworthy testing services**, upholding the **highest standards of quality**, and ensuring that everyone has access to safe, potable water. Their commitment to excellence in DBP testing is a testament to the importance of protecting public health and the environment.
