## REVISED TOTAL COLIFORM RULE REQUIREMENTS

The EPA and Oklahoma Department of Environmental Quality are implementing a Revised Total Coliform Rule that will require all Public Water Systems (PWS) to submit several documents on how to handle the new rule.

PWS's are required to develop and submit a written sampling plan that will include **all routine and repeat sample sites and a sample collection schedule**. The rule also requires the **PWS to submit a Standard Operating Procedure (SOP)** on how routine and repeat monitoring will be performed and in the case of ground water systems, how the Ground Water Rule samples will be collected.

Accurate Environmental has qualified engineers that can not only help you through this transition, but also generate the required documents and SOP's that you will need to submit to the ODEQ for approval. Let Accurate Environmental guide you through the process so that your PWS meets all new rules and regulations by the **required deadline of April 1, 2016**.
